

The Climate Finance Map

Who holds the money, what they published, and what it means for the institutions that have to explain it

Primo Strategic Communication · Research · September 2026

IN BRIEF

- Climate finance passed USD 2 trillion in 2024. That is a third of the USD 6.2 trillion a year the Climate Policy Initiative estimates is needed by 2035, and adaptation is about 3 percent of it.
- Every multilateral climate fund is raising money at the same time, in the tightest donor environment since the Paris Agreement. Each is short of its own benchmark.
- The development banks carry the volume: USD 162.5 billion in 2025, a record. The defensible figure for developing economies is USD 102.6 billion, and grants are under 4 percent of it.
- The USD 100 billion goal was met for a third year in 2024, at USD 136.7 billion. Aid fell 23 percent in 2025 and is projected to fall again. The 2025 climate figures, published in 2027, are the ones to prepare for.
- For any institution that has to communicate climate finance, the work is legibility and consistency: which number, which edition, which perimeter. This report sets out the numbers, the editions, and the traps.

THE MAP IN TEN NUMBERS

Number	What it is	Source and edition
USD 2.0 trillion	All climate finance in 2024, public and private, domestic and international. Adaptation: USD 64 billion, flat.	Climate Policy Initiative, Global Landscape of Climate Finance 2026 (24 June 2026, 2024 data)
USD 6.2 trillion a year	The annual requirement by 2035. Growth slowed to 6 percent in 2024, from 22 percent in 2022.	Same edition
USD 162.5 billion	Multilateral development bank climate finance in 2025; USD 102.6 billion of it went to developing economies, a record on both counts.	Joint MDB Climate Finance Report, 2025 edition (13 July 2026)
USD 136.7 billion	Climate finance provided and mobilised by developed countries in 2024; the USD 100 billion goal met for the third year, with adaptation at USD 34.7 billion.	OECD, 21 May 2026
USD 300 billion a year by 2035, USD 1.3 trillion from all sources	The New Collective Quantified Goal agreed at COP29. Its interpretation is the central negotiation of 2026.	Decision 1/CMA.6

Number	What it is	Source and edition
USD 310 to 365 billion a year by 2035	Adaptation finance needs in developing countries, against USD 26 billion of international public adaptation flows in 2023.	UNEP Adaptation Gap Report 2025 (29 October 2025)
USD 174.3 billion	Official development assistance in 2025, down 23.1 percent. A further 6.9 percent fall projected for 2026.	OECD preliminary data (April 2026) and projections (19 June 2026)
USD 20.4 billion	The Green Climate Fund's portfolio: 359 projects, 135 countries; a record USD 3.26 billion approved in 2025; 38 percent disbursed; 20 percent through direct access entities.	GCF Secretariat, 31 July 2026 preliminary; Climate Funds Update 2026
USD 822 million pledged, USD 449 million paid in	The Fund for Responding to Loss and Damage, with no disbursement yet and requests for USD 2.8 billion against USD 350 million allocated.	Trustee report to the Fund's eighth Board meeting, via Climate Home News (June and July 2026)
USD 107 billion	Insured natural catastrophe losses in 2025, the sixth year above USD 100 billion. Half of all losses were uninsured.	Swiss Re Institute, sigma 1/2026

Figure. Two trillion is a third of the need.

Three trackers publish three totals, and they measure different things: CPI counts USD 2.0 trillion of all climate finance in 2024; the International Energy Agency puts clean energy investment at USD 2.2 trillion for 2026; BloombergNEF counts USD 2.3 trillion of energy transition investment in 2025. They are not additive, and a communicator quoting one should say which.

1. THE FUNDS ARE ALL RAISING AT ONCE

The multilateral climate funds are the smallest money on the map and the most political. They are where the UNFCCC's commitments become grants, and in 2026 every one of them is in replenishment or capitalisation.

Sources: GCF resource mobilisation page and Climate Funds Update 2026; GEF-9 pledging release (9 Apr 2026); FRLD trustee report via Climate Home News (Jun 2026); Adaptation Fund AFB/B.46/7.

Figure. Every fund is short of its own benchmark.

Green Climate Fund. Songdo, Republic of Korea. Executive Director Mafalda Duarte since August 2023. Portfolio USD 20.4 billion across 359 projects in 135 countries, with USD 60.0 billion of co-financing, on preliminary figures to 31 July 2026. A record USD 3.26 billion was approved in 2025. Adaptation takes 60 percent in grant-equivalent terms. Two figures follow the Fund into every negotiation: USD 6.89 billion disbursed, a 38 percent rate, and 20 percent of approved funding channelled through direct access entities. GCF-2 for 2024 to 2027 stands at USD 10.64 billion from 35 contributors after the United States rescinded its USD 3 billion pledge in February 2025 and vacated its Board seat in January 2026. GCF-3, for 2028 to 2031, was launched at the 45th Board meeting in July 2026; the pledging conference is expected in autumn 2027. Five regional offices are opening in Panama City, Amman, Nairobi, Abidjan and Suva, and a Strategic Plan for 2028 to 2031 is in consultation.

Global Environment Facility. Washington. Interim CEO Claude Gascon; Diego Mesa Puyo takes office in October 2026. GEF-9 closed with USD 3.9 billion of initial pledges for July 2026 to June 2030, endorsed at the Samarkand Assembly in June. GEF-8 was USD 5.33 billion. The new cycle directs 35 percent to least developed countries and small island states and 20 percent to Indigenous peoples and local communities.

Adaptation Fund. Washington. Head Mikko Ollikainen. Over USD 1.6 billion committed since 2010 across 221 projects. Approvals set records in 2025 and again in April 2026; pledges in 2025 reached USD 138 million against a USD 300 million floor. The 2026 to 2029 strategy targets approvals of at least USD 400 million a year by 2030, in part from the 5 percent share of proceeds on Article 6.4 credits, the first of which were issued in February 2026.

Climate Investment Funds. Washington, delivered through six development banks. CEO Tariye Gbadegesin. Over USD 12 billion pledged, 82 countries, 471 projects, USD 36.3 billion of co-financing. In January 2025 the CIF Capital Markets Mechanism issued a USD 500 million three-year bond, rated Aa1 and AA+, six times oversubscribed: the first multilateral climate fund to tap capital markets.

Fund for Responding to Loss and Damage. Hosted by the World Bank as an interim financial intermediary fund, with the Board seated in the Philippines. Executive Director Ibrahima Cheikh Diong. USD 822 million pledged by 27 contributors as of March 2026, about USD 449 million paid in. The first call for requests, under the Barbados Implementation Modalities, closed on 15 June 2026 with close to 180 submissions worth about USD 2.8 billion against USD 350 million allocated. First funding decisions are scheduled for the tenth Board meeting, 15 to 18 December 2026, in Manila. The first replenishment is planned for 2027.

The early-warning instruments. SOFF, the Systematic Observations Financing Facility hosted by WMO with UNDP and UNEP, has USD 147.8 million committed against a USD 200 million target that an impact bond is meant to close by end-2026, with 66 countries programmed. CREWS, the Climate Risk and Early Warning Systems initiative, has contributed USD 142.4 million since 2016 to 84 countries and territories and drawn in a further USD 2.8 billion; it holds USD 12.3 million against a USD 124 million pipeline. Both sit under Early Warnings for All, costed at USD 3.1 billion to 2027, with 119 countries reporting a multi-hazard early warning system and 43 percent of small island states covered.

The pattern. The common shock is the withdrawal of the United States from the Convention, the Green Climate Fund and the energy transition partnerships, and the common response is diversification: capital markets for CIF, carbon markets for the Adaptation Fund, an impact bond for SOFF, philanthropy for all of them. The COP29 instruction to at least triple outflows by 2030 is now the yardstick the four large funds report against together.

2. THE BANKS CARRY THE VOLUME

Source: 2025 Joint Summary Report on Multilateral Development Banks' Climate Finance (EIB, 13 July 2026), EUR converted at 1.13.

Figure. The banks: USD 162.5 billion, of which 102.6 for developing economies.

The 2025 joint report, published by the European Investment Bank on behalf of ten banks on 13 July 2026, is the newest edition. Total MDB climate finance rose 19 percent to USD 162.5 billion. Finance to low- and middle-income economies rose 21 percent to USD 102.6 billion and has doubled in five years. Adaptation in those economies rose 31 percent to USD 34.6 billion, close to the USD 42 billion the banks committed to for 2030. Private mobilisation was USD 116 billion, of which USD 35 billion in low- and middle-income economies against a 2030 target of USD 65 billion. Grants were USD 6.0 billion of the total.

One caution governs every comparison. The World Bank Group and IFC report on a July-to-June fiscal year; every other bank and the joint report use the calendar year.

World Bank Group. Fiscal 2025 climate finance a record USD 50.8 billion, 48 percent of total financing, 9 percent of it grants. On 29 June 2026 the Board extended the Climate Change Action

Plan indefinitely and retired the 45 percent target, while continuing to report climate finance. IDA21 provides a record USD 100 billion for fiscal 2026 to 2028 from USD 23.7 billion of donor pledges. IFC committed USD 8.1 billion of own-account climate finance in fiscal 2025 and mobilised USD 16.4 billion, two dollars of third-party capital for each of its own.

Asian Development Bank. USD 13.5 billion of climate finance in 2025, 51 percent of own-resource commitments, five years ahead of its 50 percent target for 2030. Cumulative 2019 to 2025: USD 55.4 billion toward a USD 100 billion ambition. Guarantees from five governments under IF-CAP, about USD 2.2 billion, each carry up to five dollars of lending.

Asian Infrastructure Investment Bank. President Zou Jiayi since January 2026, 111 members. Climate share of approvals 71 percent in 2025, the highest of any development bank, on USD 10.6 billion of approvals; USD 10.2 billion raised in sustainability bonds.

African Development Bank. President Sidi Ould Tah since September 2025. USD 5.93 billion of climate finance in 2025, 54 percent of approvals, and the only bank where adaptation outweighs mitigation, at 58 percent. ADF-17 closed in December 2025 at a record USD 11 billion, with 24 African countries among the contributors; the initial ask was USD 25 billion.

Inter-American Development Bank Group. About USD 9.6 billion in 2025. Targets set at COP29: USD 11.3 billion a year by 2030 and USD 25 billion of adaptation finance over 2024 to 2030, the most specific adaptation commitment among the regional banks.

European Investment Bank. A record EUR 100 billion signed by the Group in 2025, EUR 57 billion of it for climate and environment; the Bank alone reports EUR 50.3 billion. Climate Bank Roadmap phase two, for 2026 to 2030, doubles adaptation finance to EUR 30 billion. Ninety-two percent of EIB's climate finance goes to high-income economies, which is why the joint headline needs its developing-economy caveat.

European Bank for Reconstruction and Development. EUR 9.4 billion of green finance in 2025, 56 percent of a record EUR 16.8 billion, on a 75 percent private-sector book, with first investments in sub-Saharan Africa and Iraq.

NDB, IsDB, CAF. The New Development Bank's climate finance fell to USD 1.2 billion in 2025 from USD 2.5 billion in 2024. The Islamic Development Bank reports 42 percent climate finance, USD 2.4 billion on the Bank basis or USD 6.6 billion on the Group basis. CAF, not a joint-report signatory, approved a record USD 18.7 billion in 2025 with a 44 percent green share and a 50 percent target for 2030.

Reform. The balance-sheet half of the "bigger and better" agenda has largely happened: ADB up 50 percent, IBRD about USD 100 billion of additional lending over a decade, hybrid capital placed, and a revised S&P methodology implying USD 600 to 800 billion of headroom. The G20 finance ministers produced no communiqué in April 2026, so the working venue is the heads of the banks themselves, and the Annual Meetings in Bangkok in October.

3. GOALS, RULES AND PROVIDERS

The architecture. The UNFCCC Financial Mechanism has two operating entities, the GCF and the GEF. The Adaptation Fund and the loss and damage fund also serve the Paris Agreement. The Standing Committee on Finance counts the flows every two years; its Sixth Biennial Assessment put

global climate finance at USD 1.3 trillion a year for 2021 and 2022, with 2.6 percent reaching least developed countries and 1.0 percent small island states.

The accounting. The OECD's eighth assessment, released 21 May 2026, records USD 115.9 billion in 2022, USD 132.8 billion in 2023 and USD 136.7 billion in 2024. Public finance is about three-quarters of the total; adaptation a quarter; loans fell to 67 percent of public finance and grants rose to 29 percent. The Glasgow commitment to double adaptation finance from the 2019 baseline of USD 18.8 billion still requires a further USD 5.8 billion in 2025.

The goal. COP29 set the New Collective Quantified Goal: at least USD 300 billion a year by 2035 for developing countries, developed countries taking the lead, and USD 1.3 trillion a year from all sources. The Baku to Belém Roadmap of November 2025 sets out five fronts to reach it. Developed countries read the USD 300 billion as multi-source; developing countries read Article 9.1 of the Paris Agreement as the anchoring obligation. That difference sits under every finance text this year.

Belém and Antalya. COP30 called for efforts to at least triple adaptation finance by 2035, without a baseline year or a named contributor set; adopted 59 of 100 indicators for the Global Goal on Adaptation; and launched a two-year work programme on Article 9. Bonn in June 2026 passed the adaptation text to COP31 in brackets. COP31 is Antalya, 9 to 20 November 2026: Türkiye holds the presidency under Murat Kurum, and Australia's Chris Bowen leads the negotiations. Three finance items are unfinished: the Article 9 work programme's first outputs, a baseline and tracking method for the adaptation tripling, and the Adaptation Fund's governance.

The United States. For the record, in sequence: withdrawal from the Paris Agreement effective 27 January 2026; USD 4 billion of outstanding GCF pledges rescinded in February 2025; exit from the Just Energy Transition Partnerships in March 2025; USAID closed on 1 July 2025 with over 98 percent of climate-tagged awards, USD 2.1 billion, terminated; a memorandum of 7 January 2026 withdrawing from the UNFCCC and the IPCC; the GCF Board seat vacated on 8 January 2026. The last full-year figure was over USD 11 billion in fiscal 2024. Germany, Japan and the banks have replaced specific lines, Indonesia's partnership among them, not the aggregate.

Fifteen of 23 providers met their fair share of the USD 100 billion in 2023

Climate finance provided against a share apportioned by cumulative emissions, income and population

Source: ODI, A fair share of climate finance? (November 2025, 2023 data).

Figure. Fifteen of 23 providers met their fair share in 2023.

The providers. ODI's November 2025 assessment apportions the USD 100 billion by cumulative emissions, income and population. Fifteen of 23 providers met their share in 2023, the most yet, with Norway, France, Sweden and Japan above double. France and Japan reach their totals largely through loans. The table below gives each major provider's latest figure and what changed in 2026.

Provider	Latest figure	2026
Japan	USD 70 billion public and private through 2025; USD 22.3 billion in 2023, mostly JICA loans	No successor pledge published by September 2026
Germany	EUR 6.1 billion in 2024, the EUR 6 billion pledge met early	Projected EUR 4.9 to 5.7 billion in 2025 after budget cuts; EUR 1 billion over ten years to the Tropical Forests Forever Facility
France	EUR 7.2 billion in 2024, of which about 80 percent as loans	Fifth consecutive aid cut; the 2026 budget reduces multilateral aid 42 percent; no post-2025 target
United Kingdom	GBP 11.6 billion over 2021/22 to 2025/26	ICF4: about GBP 6 billion of aid over three years plus GBP 6.7 billion of non-aid instruments; aid to 0.3 percent of GNI by 2027
EU institutions and member states	EUR 31.7 billion public plus EUR 11.0 billion mobilised in 2024	Global Gateway passed EUR 306 billion mobilised; it is an investment brand, not a climate finance line
Norway	Record NOK 30.3 billion in 2025, up 60 percent, mostly Norfund mobilisation	Oslo expects 2026 to fall; USD 3 billion to the forest facility
Sweden	Record SEK 11.1 billion in 2024; SEK 8 billion to GCF-2	Aid budget SEK 53 billion a year for 2026 to 2028
Denmark	Record DKK 6 billion in 2024; DKK 1.6 billion to GCF-2	Aid held at 0.7 percent of GNI

Provider	Latest figure	2026
Canada	CAD 5.3 billion over 2021 to 2026	Renewed at CAD 3 billion public plus CAD 2 billion of FinDev capital
Australia	A\$3.9 billion delivered against a A\$3 billion pledge to 2025	No post-2025 commitment as of late August 2026, while leading the COP31 negotiations

The aid picture. Official development assistance fell 23.1 percent in 2025 to USD 174.3 billion, and the OECD projects a further 6.9 percent fall in 2026, with aid to least developed countries down 10.9 percent. Climate finance held in the 2024 data because the banks and mobilised private finance carried it. The 2025 figures arrive in 2027.

4. ADAPTATION IS THE STORY

Figure. The adaptation gap is twelve to fourteen times the flow.

Two measures of adaptation finance are in circulation, and they are not the same: the OECD's USD 34.7 billion provided and mobilised in 2024, and UNEP's USD 26 billion of international public flows in 2023. Against needs of USD 310 to 365 billion a year by 2035, the gap is twelve to fourteen times the flow on either measure. The Glasgow doubling to about USD 40 billion by 2025 will be missed on current trends. Adaptation was 3 percent of all climate finance in 2024 and flat, while insured catastrophe losses exceeded USD 100 billion for a sixth consecutive year, at USD 107 billion, with half of all losses uninsured.

Private capital. The net-zero coalitions dissolved or narrowed in 2025: the Net-Zero Banking Alliance ceased operations in October; the asset managers' initiative relaunched in February 2026 with 253 signatories and no 2050 wording; GFANZ restructured into a capital-mobilisation platform. European banks largely kept their interim targets. Labelled sustainable debt passed USD 1 trillion for a third year, with cumulative issuance crossing USD 7 trillion in May 2026. Blended finance runs at USD 15 to 18 billion a year, under 2 percent of emerging-economy climate flows; it matters as a de-risking instrument, not as volume. The World Bank's Guarantee Platform issued USD 12.3 billion in its first year, on a path to USD 20 billion by 2030.

Philanthropy. Climate philanthropy was USD 11.7 to 18.4 billion in 2024, about 2 percent of global giving and under 1 percent of climate finance. The Bezos Earth Fund had placed USD 2.4 billion of a USD 10 billion pledge by April 2026; the IKEA Foundation paid out EUR 404 million in 2025, EUR 354 million of it for climate; the Gates Foundation committed USD 1.4 billion over 2026 to 2029 to

smallholder adaptation; Bloomberg Philanthropies is covering the American share of the UNFCCC secretariat's budget.

New instruments. The Tropical Forests Forever Facility launched at COP30 with USD 5.5 billion toward a USD 10 billion first-year threshold, with Germany's EUR 1 billion and the United Kingdom's GBP 400 million loan following. A nine-country coalition on premium-flyer levies formed under the Global Solidarity Levies Task Force. The Paris Agreement Crediting Mechanism issued its first credits in February 2026, deliberately small and conservatively calculated.

5. WHAT IT MEANS FOR COMMUNICATORS

Climate finance is where the climate story is decided now. The science is settled enough; the money is not. Every fund, bank and ministry on this map is telling two stories in 2026, more money than ever and not nearly enough, and the institutions that communicate well are the ones that hold both without contradiction. Five implications follow.

Legibility is the work. Most of the figures above are true and most of them are misread. USD 163 billion is not the figure for developing countries; USD 103 billion is. EUR 57 billion and EUR 50.3 billion are both EIB, on two perimeters. A fiscal-year figure does not add to a calendar-year table. An institution that says which number, which edition and which perimeter, every time, earns a credibility its peers spend.

Pledged is not paid, and audiences know it. The loss and damage fund has USD 822 million pledged, USD 449 million in the bank and nothing disbursed. GCF-2 is USD 10.64 billion after a rescission that older pages still do not show. Communications that lead with pledges and hope no one checks the trustee report are communications that end in a correction.

Adaptation has two honest numbers. USD 34.7 billion and USD 26 billion are both defensible and measure different things. An institution should choose one, say which, and hold it. A tripling target without a baseline is an argument, not a number, until COP31 gives it one.

The 2025 figures are the ones to prepare for. Aid fell 23 percent in 2025. The 2024 climate finance data held because the banks and mobilised private finance carried it. When the 2025 series publishes in 2027, the narrative will have to absorb a decline. The institutions that have built their story on outcomes rather than volumes will absorb it better.

Volumes persuade less than instruments. Guarantees that turn one dollar into five, a bond six times oversubscribed, a facility that pays for data actually shared: these are the stories that travel, because they explain how the money works rather than how much of it there is. The banks and funds that can explain an instrument in one sentence to a journalist have an advantage in a replenishment year.

Lines that hold

1. Two trillion is a third of the need, and adaptation is 3 percent of it.
2. The banks did USD 163 billion; the figure for developing countries is USD 103 billion, and grants are under 4 percent.
3. The 100 billion was met three years running; a quarter is adaptation, two-thirds of the public money is loans.
4. Every climate fund is raising at once, and each is short of its own benchmark.
5. Three trackers, three totals; never add them.

ANNEX. INSTITUTIONS AT A GLANCE

- **Green Climate Fund** · Executive Director Mafalda Duarte · USD 20.4bn portfolio; USD 3.26bn approved in 2025; GCF-3 launched July 2026
- **Global Environment Facility** · Claude Gascon (interim); Diego Mesa Puyo from October 2026 · GEF-9 USD 3.9bn for 2026 to 2030
- **Adaptation Fund** · Head Mikko Ollikainen · USD 1.6bn committed since 2010; USD 138m pledged in 2025
- **Climate Investment Funds** · CEO Tariye Gbadegesin · Over USD 12bn pledged; USD 500m bond, January 2025
- **Fund for Responding to Loss and Damage** · Executive Director Ibrahima Cheikh Diong · USD 822m pledged, about USD 449m paid
- **SOFF** · Director Markus Repnik · USD 147.8m committed toward a USD 200m target for 2026
- **CREWS** · Director John Harding · USD 142.4m contributed since 2016
- **World Bank Group** · President Ajay Banga · USD 50.8bn climate finance in fiscal 2025, 48 percent
- **IFC** · Managing Director Makhtar Diop · USD 8.1bn own account plus USD 16.4bn mobilised, fiscal 2025
- **Asian Development Bank** · President Masato Kanda · USD 13.5bn in 2025, 51 percent
- **AIIB (Asian Infrastructure Investment Bank)** · President Zou Jiayi · 71 percent climate share on USD 10.6bn of 2025 approvals
- **African Development Bank** · President Sidi Ould Tah · USD 5.93bn in 2025, 54 percent, adaptation 58 percent
- **IDB (Inter-American Development Bank)** · President Ilan Goldfajn · About USD 9.6bn in 2025; USD 11.3bn a year by 2030
- **European Investment Bank** · President Nadia Calviño · EUR 57bn Group, EUR 50.3bn Bank, 2025
- **EBRD** · President Odile Renaud-Basso · EUR 9.4bn green finance in 2025, 56 percent
- **UNFCCC** · Executive Secretary Simon Stiell · COP31 Antalya, 9 to 20 November 2026
- **UNDP** · Administrator Alexander De Croo · Largest GEF agency, 29 percent of GEF-8
- **UNEP** · Executive Director Inger Andersen · Adaptation Gap Report: needs USD 310 to 365bn a year by 2035
- **WMO** · Secretary-General Celeste Saulo · Hosts CREWS, co-created SOFF, co-leads Early Warnings for All
- **Climate Policy Initiative** · Global Managing Director Barbara Buchner · Global Landscape of Climate Finance, published each June

METHODS AND VERIFICATION

The research was conducted in the first week of September 2026 from each institution's latest annual report, results report, trustee statement or Board communiqué, with the OECD, UNFCCC, ODI, Heinrich Böll Stiftung and Climate Policy Initiative as the counting references and Climate Home News, Devex and Carbon Brief for developments. Every figure carries the edition it came from,

because a 2025 report and a 2026 report can differ by a fifth. Four research files with a URL for every figure accompany this report.

Where a figure could not be confirmed against a primary source it is stated as such rather than smoothed over. Open items at publication: a standalone GCF Annual Results Report 2025 was not located; the final GEF-9 total after the July 2026 trustee resolution; the loss and damage fund's paid-in figure is taken from Climate Home News citing the trustee report; Global Shield's donor total; the World Bank's fiscal 2025 split by institution; CPI's public-private split and China's share for 2024; Bloomberg Philanthropies' exact UNFCCC contribution; Japan's post-2025 pledge. Names of ministers and agency heads change often and should be re-verified the week they are used.

ABOUT PRIMO

Primo Strategic Communication is a consultancy for public institutions, operated from Asia by a principal with fifteen years inside the UN system, UNICEF and the Forest Stewardship Council. Primo helps institutions get understood: by policymakers, by publics, and by the people a mandate exists to serve.

For climate finance institutions, that work takes five forms. Research: the audience and media landscape before a franc is spent, so that a replenishment case is built on what donors and publics actually believe. Strategy: outcome objectives, a stakeholder map, and a message house where every proof point carries a citation and an edition. Production: flagship launches and always-on presence across owned, earned, shared and paid channels, written for human readers and answer engines alike. Measurement: evaluation on the AMEC chain, outputs to outcomes to impact, and a knowledge base the institution keeps when the engagement ends. Capacity: teams trained, workflows documented, communicators coached until the infrastructure is theirs.

The map will be kept current. Corrections and additions are welcome.
