

STRATEGIC COMMUNICATION

The Climate Finance Map

Who holds the money, what they published, and what I would say in the room

Jesse Cruz, Principal, Primo Strategic Communication · 7 September 2026

WHY I BUILT THIS

I did not want the numbers to meet me for the first time in a room where they matter. So I read the annual reports. Not the summaries of the summaries: the latest editions, the trustee statements, the board communiqués, and the people who track this for a living. Then I wrote down what I found in the order I would want it if someone handed it to me the week before a decision.

The map is for anyone who has to put climate finance into public language. Climate finance is where the climate story gets decided now. The science is settled enough; the money is not. Every fund, bank and ministry on these pages is telling one of two stories in 2026, and usually both: more money than ever, and not nearly enough. Knowing which number each of them is standing on is the whole job.

Two rules governed the writing. Every figure carries the edition it came from, because a 2025 report and a 2026 report can differ by a fifth. And where the researchers could not confirm a number against a primary source, it says so in the text. A wrong number in a room full of people who live on these numbers is the one mistake that does not get forgiven. Full source lists, with a URL for every figure, sit in the four research files that travel with this document.

THE BOARD IN TEN NUMBERS

If you hold nothing else, hold these.

Number	What it is	Source and edition
USD 2.0 trillion	All climate finance in the world in 2024, public and private, domestic and international. First crossing of the two-trillion line. Adaptation was USD 64 billion of it, and flat.	Climate Policy Initiative, Global Landscape of Climate Finance 2026 (24 June 2026, 2024 data)
USD 6.2 trillion a year	What CPI says is needed by 2035. Growth in 2024 slowed to 6 percent, down from 22 percent in 2022.	Same edition
USD 162.5 billion	Multilateral development bank climate finance in 2025, a record. USD 102.6 billion of it went to low- and middle-income economies.	Joint MDB Climate Finance Report, 2025 edition (13 July 2026)
USD 136.7 billion	Climate finance provided and mobilised by developed countries in 2024. The USD 100 billion goal was met for the third year running. Adaptation: USD 34.7 billion.	OECD, 21 May 2026

Number	What it is	Source and edition
USD 300 billion a year by 2035, USD 1.3 trillion from all sources	The New Collective Quantified Goal agreed at COP29 in Baku. The argument over who owes what inside it is the live fight of 2026.	Decision 1/CMA.6
USD 310 to 365 billion a year by 2035	Adaptation finance needs in developing countries, against USD 26 billion of international public adaptation flows in 2023. A gap of twelve to fourteen times.	UNEP Adaptation Gap Report 2025 (29 October 2025)
USD 174.3 billion	Official development assistance in 2025, down 23.1 percent, the steepest fall on record. The OECD projects another 6.9 percent drop in 2026.	OECD preliminary data (April 2026) and projections (19 June 2026)
USD 20.4 billion	The Green Climate Fund's portfolio, 359 projects, 135 countries. A record USD 3.26 billion approved in 2025. Only 38 percent disbursed and only 20 percent through direct access entities.	GCF Secretariat, 31 July 2026 preliminary; Climate Funds Update 2026
USD 822 million pledged, about USD 449 million paid, nothing disbursed	The Fund for Responding to Loss and Damage. Its first call drew requests for USD 2.8 billion against USD 350 million allocated. First approvals now due in December 2026.	Trustee report to the Fund's eighth Board meeting, via Climate Home News (June and July 2026)
USD 107 billion	Insured natural catastrophe losses in 2025, the sixth year above USD 100 billion. Half of all losses stayed uninsured.	Swiss Re Institute, sigma 1/2026

Three trackers, three totals, one direction: CPI counts USD 2.0 trillion of all climate finance in 2024; the International Energy Agency puts clean energy investment at USD 2.2 trillion for 2026; BloombergNEF counts USD 2.3 trillion of energy transition investment in 2025. They measure different things. Never add them, and always say which one you are quoting.

PART ONE. THE FUNDS

The multilateral climate funds are the smallest money on this map and the most political. They are where the UNFCCC's promises become grants, and in 2026 every one of them is raising money at the same time, in the worst donor climate since the Paris Agreement.

Green Climate Fund

Songdo, Republic of Korea. Executive Director Mafalda Duarte, since August 2023; before that a decade running the Climate Investment Funds and years at the World Bank and the African Development Bank. A 24-seat Board split evenly between developed and developing countries, co-chaired for 2025 and 2026 by Seyni Nafo of Mali and Leif Holmberg of Sweden. The World Bank is trustee to April 2027.

The numbers, preliminary to 31 July 2026: USD 20.4 billion of GCF financing, USD 60.0 billion of co-financing, 359 projects in 135 countries. Calendar 2025 was the record year, USD 3.26 billion across 50 funding proposals. Adaptation takes 60 percent in grant-equivalent terms, 50.5 percent nominally. The two numbers the critics hold: USD 6.89 billion disbursed, a 38 percent rate, and 20 percent of approved funding flowing through direct access entities, a share that has not moved in years.

The replenishment story is the 2026 story. GCF-2 for 2024 to 2027 stands at USD 10.64 billion from 35 contributors, over 90 percent confirmed by January 2026. That total already excludes the United States, which rescinded its USD 3 billion pledge in February 2025, left the unpaid USD 1 billion from the first round on the table, and vacated its Board seat on 8 January 2026. GCF-3, for 2028 to 2031, was formally launched at the 45th Board meeting in Dushanbe in July 2026. Contribution policies are due by the 47th meeting in 2027. The pledging conference is expected in autumn 2027. The "USD 50 billion by 2030" ambition announced at the UN General Assembly in September 2023 is now widely described as unrealistic, including by the Heinrich Böll Stiftung in May 2026.

What else moved in 2026: five regional offices chosen from 43 applicant countries (Panama City, Amman, Nairobi, Abidjan, Suva); a refined commitment authority framework the Secretariat says unlocks a further USD 4.3 billion; the Gender Action Plan 2026 to 2031; country-ownership guidelines due for rewrite by October; a Strategic Plan for 2028 to 2031 in consultation; and a staffing plan of 365 by end-2026 under new staff regulations. WHO became an accredited entity in March 2026, UNICEF's accreditation agreement took effect in June.

In the room: lead with USD 20 billion, the record year and 60 percent adaptation. Then be ready for the counter-story in the same breath, because the panel has heard it: 38 percent disbursed, 20 percent direct access, the American money gone. GCF's communications through 2027 is a replenishment campaign under austerity, and the vocabulary is USP-3, B.46 and B.47, DAE against IAE, and the readiness programme at 898 grants and USD 778.5 million.

Global Environment Facility

Washington, on the World Bank campus. Interim CEO Claude Gascon since December 2025; Diego Mesa Puyo, a former Colombian energy minister and IMF climate-policy deputy chief, takes over at the beginning of October 2026. The GEF serves five conventions at once and runs the Least Developed Countries Fund and the Special Climate Change Fund for the UNFCCC.

GEF-8 was USD 5.33 billion for July 2022 to June 2026, about 16 percent of it for climate mitigation. GEF-9 closed with USD 3.9 billion of initial pledges on 9 April 2026 and was endorsed at the Eighth Assembly in Samarkand in June: 27 percent smaller than GEF-8, the first shrinking replenishment in the GEF's modern history. Design features worth knowing: 35 percent for least developed countries and small island states, 20 percent for Indigenous peoples and local communities, an aspiration to programme a quarter through blended finance. The June 2026 LDCF and SCCF work programme was USD 67.7 million for eight projects. The delegates' summary recorded seven technically cleared projects that GEF-8 could not fund.

In the room: the GEF's 2026 message is integration at scale under a smaller envelope, with a new chief executive who comes from energy transition and the IMF. It is convention-facing communication: guidance from the COP to the GEF, the GEF's report back, an Assembly every four years.

Adaptation Fund

Washington, secretariat hosted alongside the GEF. Head Mikko Ollikainen. New Board chair Ali Daud Mohamed of Kenya and vice-chair Francisca Molina of Spain since April 2026.

Over USD 1.6 billion committed since 2010 across 221 projects, benefiting over 65 million people. Two record approval years running: over USD 137 million in April 2025, over USD 125 million in October 2025, USD 133.8 million in April 2026. The problem is the other side of the ledger. Pledges in 2025 reached USD 138 million against a floor of USD 300 million. The new resource mobilisation strategy for 2026 to 2029 aims at approvals of at least USD 400 million a year by 2030, the "triple outflows" yardstick written into the COP29 finance decision. Part of that plan is the 5 percent share of proceeds the Fund is owed on every Article 6.4 credit issued. The first such credits were issued in February 2026; no cash receipt from them had been reported when this was written.

In the room: the direct-access pioneer with the most human-scale story on this map, and the most volatile funding. It lives on annual COP pledging moments and now has to explain carbon markets to its donors. Vocabulary: national, regional and multilateral implementing entities; enhanced direct access; locally led adaptation; share of proceeds.

Climate Investment Funds

Washington, hosted at the World Bank, delivered only through six development banks. CEO Tariye Gbadegesin since March 2024. Two trust funds, the Clean Technology Fund and the Strategic Climate Fund. Over USD 12 billion pledged (the CIF's own pages also say "almost 14 billion"), 82 countries, 471 projects, USD 36.3 billion of co-financing. The Clean Technology Fund alone: USD 6.49 billion pledged, USD 4.36 billion transferred to the banks, leverage of one to twelve.

The single most quotable innovation on this map: on 22 January 2025 the CIF Capital Markets Mechanism issued a USD 500 million three-year bond at 4.75 percent, rated Aa1 and AA+, six times oversubscribed, frontloading the Clean Technology Fund's reflows. No second issuance had been found by September 2026. Since November 2025 the four large funds, the Adaptation Fund, CIF, GEF and GCF, publish a joint results report, and GCF chairs their coordination mechanism in 2026.

In the room: CIF does not lend, so its story is leverage, first-of-a-kind projects and capital-market access. Expect the bond in any question about innovative finance.

Fund for Responding to Loss and Damage

Agreed at COP27, operational since COP28, hosted for four years by the World Bank as a financial intermediary fund, with the Board seated in the Philippines. Executive Director Ibrahima Cheikh Diong of Senegal since 1 November 2024. Board co-chairs for 2026: Camila Minerva Rodríguez Tavárez of the Dominican Republic and Georg Børsting of Norway.

USD 822 million pledged by 27 contributors as of March 2026; about USD 449 million actually delivered, with Italy, France and Luxembourg among those not yet paid in full. The start-up window, the Barbados Implementation Modalities, set aside USD 250 million in grants of USD 5 to 20 million. The call that closed on 15 June 2026 drew close to 180 requests worth about USD 2.8 billion. The ninth Board meeting in Manila in July did not approve any of them; it released a further USD 100 million and moved the first decisions to the tenth meeting, 15 to 18 December 2026, also in Manila. The Secretariat's own framing paper warned of exhausting capital by the end of 2027. First replenishment is planned for 2027. Nigeria's minister called the fund "a mirage" in June. The Nepal

glacial flood of late August 2026 produced a formal request and a demand from eight developing-country Board members for an emergency meeting to test the rapid-response modality.

In the room: the gap between symbol and cash is the communications problem, and December is when the fund either breaks the mirage narrative or confirms it. Anyone working here should have a view on rapid response versus project cycles. The institutional anatomy to hold cold: World Bank host to 2028, Philippines Board host, Diong, the Barbados modalities, the Fill the Fund campaign asking for USD 50 billion a year.

SOFF, the Systematic Observations Financing Facility

Geneva, hosted by WMO, created in 2022 with UNDP and UNEP. Director Markus Repnik. Steering committee co-chaired by WMO Secretary-General Celeste Saulo and Ambassador Willem Van de Voorde of Belgium. This is the one fund on the map I worked beside, as a member of the WMO communication focal-point network in its early years.

USD 147.8 million committed and USD 143.0 million deposited from 12 contributors, against a USD 200 million target that an impact bond, the first on weather and climate data, is meant to close by end-2026. Norway is the largest contributor at USD 29.2 million; the United States sits at USD 13.3 million from before 2025. Country funding approved: USD 116 million across 66 programmed countries in the October 2025 Action Report, USD 126 million for 23 countries in the investment phase on the live trust-fund gateway in September 2026. Long-run need: USD 500 million for infrastructure and capacity plus about USD 50 million a year to keep stations running. SOFF pays on results: money moves when data is actually shared.

In the room: the cleanest theory of change anywhere in climate finance. No data, no forecast, no warning. It is pillar two of Early Warnings for All, and the ECMWF experiments of June 2025 give it a number: closing the observation gap could cut forecast uncertainty in Africa by up to 30 percent.

CREWS, the Climate Risk and Early Warning Systems initiative

Geneva, secretariat at WMO, trust fund at the World Bank, implemented by WMO, the World Bank's Global Facility for Disaster Reduction and Recovery, and UNDRR. Director John Harding. Twelve contributing members; France is the largest at USD 51.4 million.

A decade in: USD 142.4 million contributed since 2016, USD 136.7 million in funding decisions, USD 131.9 million transferred, 84 countries and territories supported (95 percent of all least developed countries and small island states), USD 2.8 billion leveraged from the World Bank, GCF and others. The 2026 problem is liquidity: USD 12.3 million available against a USD 124 million pipeline as of 31 March 2026. The tenth-anniversary annual report, "A decade of delivery", was published in May 2026 alongside a new strategy and a scaling-up framework linked to GCF.

In the room: the last-mile fund of the early-warning family, tiny by volume, with a story in every least developed country. Vocabulary: the Common Alerting Protocol, impact-based forecasting, the accelerated support window, the fourteen Early Warnings for All roadmap countries.

Three adjacent players

Global Shield against Climate Risks. The G7 and V20 vehicle for pre-arranged finance and insurance, launched at COP27. Secretariat moved to the Frankfurt School of Finance and Management on 1 January 2026; Marike Brady is Director since 1 May 2026. Donor funding about EUR 350 million by mid-2025 (a lower EUR 270 million figure also circulates; neither was confirmed on a primary page). Active in twelve countries plus the Pacific. The line: Global Shield is before-the-storm money, the loss and damage fund is after-the-storm money, and Germany funds both.

NDC Partnership. A coalition, not a fund: over 240 members, around 140 of them countries, with a support unit split between the World Resources Institute in Washington and the UNFCCC with UNOPS in Bonn. Global Director Pablo Vieira. A 2026 to 2030 work programme is in place. Its co-chairs for 2025 and 2026 were reported as Brazil and Denmark; that could not be confirmed directly.

Early Warnings for All. The Secretary-General's 2022 initiative for universal coverage by 2027, costed at USD 3.1 billion across four pillars led by UNDRR, WMO, ITU and IFRC, with SOFF and CREWS as the purpose-built instruments underneath. Status from the November 2025 global report: 119 countries report a multi-hazard early warning system, 60 percent of the world, but only 43 percent of small island states. The investment observatory finds 54 percent of reported funding concentrated in five countries and 75 percent of it as loans. This is the initiative I ran the communications for at WMO, and the honest line is the one above: coverage doubled since 2015, the deadline is next year, and the gap is islands and least developed countries.

The pattern across the funds

All of them are raising money at once. GCF-3 launched, pledging in 2027. GEF-9 closed 27 percent down. The Adaptation Fund needs to triple outflows on a base it cannot fill. The loss and damage fund replenishes in 2027 with nothing disbursed. SOFF's bond closes by December. CREWS has a tenth of its pipeline in the till. The common shock is the American retreat, and the common response is diversification: capital markets for CIF, carbon markets for the Adaptation Fund, an impact bond for SOFF, philanthropy for all of them. The COP29 instruction to "at least triple outflows by 2030" is now the yardstick the four large funds report against together.

PART TWO. THE BANKS

The development banks are where the volume is. One caution before every number: the World Bank Group and IFC report on a July-to-June fiscal year, everyone else on the calendar year. Never add a fiscal-year figure to a calendar-year table.

The joint report

The 2025 edition, published 13 July 2026 by the European Investment Bank on behalf of ten banks, is the newest. Total MDB climate finance USD 162.5 billion, up 19 percent. USD 102.6 billion to low- and middle-income economies, up 21 percent and doubled in five years; USD 59.9 billion to high-income economies. Adaptation in low- and middle-income economies rose 31 percent to USD 34.6 billion, close to the USD 42 billion the banks promised for 2030. Private mobilisation USD 116 billion, but

only USD 35 billion of it in low- and middle-income economies, against a 2030 target of USD 65 billion. Grants were USD 6.0 billion of the total, under 4 percent.

The 2030 estimates the banks announced at COP29 and restate here: USD 120 billion a year for low- and middle-income economies, including USD 42 billion adaptation, plus USD 65 billion mobilised; USD 50 billion a year for high-income economies.

Per bank, 2025 commitments: World Bank Group USD 52.9 billion, EIB USD 56.4 billion, ADB USD 14.8 billion, EBRD USD 11.2 billion, IDB Group USD 9.6 billion, AIIB USD 7.5 billion, AfDB USD 5.9 billion, IsDB USD 2.4 billion, NDB USD 1.2 billion.

The trap: EIB alone is a third of the headline and almost all of it lands in Europe. Anyone who says "USD 163 billion for developing countries" is wrong by USD 60 billion. The defensible number for the Global South is USD 103 billion, and grants are under 4 percent of it, which is where the debt-sustainability critics start.

World Bank Group

Washington. President Ajay Banga since June 2023. Fiscal 2025 climate finance a record USD 50.8 billion, 48 percent of total financing; only 9 percent of it grants. Then, on 29 June 2026, the Board extended the Climate Change Action Plan indefinitely and retired the 45 percent target. Treasury Secretary Scott Bessent had called it "distortionary" in April. The Bank keeps reporting climate finance to the Board; the Independent Evaluation Group reviews the plan on no fixed timeline. The volume held the year before the label went; the communications job for any fund that co-finances with the Bank is to describe outcomes, resilience, jobs, energy access, in language that survives Washington.

Two channels matter more than the headline for a climate fund. IDA21: a record USD 100 billion package for fiscal 2026 to 2028 from USD 23.7 billion of donor pledges, with a mid-term review in December 2026 and an American request 9 percent below its IDA20 level. And the Bank's hosting of the loss and damage fund as an interim financial intermediary fund. Other 2026 markers: hybrid capital signed with eleven members for USD 989 million notional, part of a package the Bank says adds about USD 100 billion of lending over ten years; the nuclear financing ban lifted in June 2025; Annual Meetings in Bangkok, 12 to 18 October 2026.

IFC. Managing Director Makhtar Diop since March 2021. Fiscal 2025: USD 8.1 billion of own-account climate finance, 45 percent of commitments, only USD 558 million of it adaptation, plus USD 16.4 billion of core mobilisation. Two dollars of third-party money for every dollar of its own is the ratio to quote; 100 percent Paris-aligned from 1 July 2025. Adaptation is its weak flank, which makes an adaptation fund a natural partner rather than a competitor.

Asian Development Bank

Manila. President Masato Kanda since 24 February 2025. In 2025 ADB crossed the line it had set for 2030: USD 13.5 billion of climate finance, 51 percent of committed financing from own resources; USD 14.8 billion counting technical assistance, split 64 percent mitigation and 36 percent adaptation. Cumulative 2019 to 2025: USD 55.4 billion against the USD 100 billion ambition for 2019 to 2030.

Total 2025 commitments USD 29.3 billion, up 20 percent, in an annual report dated 7 September 2026, the day this was written.

IF-CAP, the Innovative Finance Facility for Climate in Asia and the Pacific, is the cleanest live example of guarantees as climate finance: about USD 2.2 billion of sovereign guarantees on the loan book, each dollar unlocking up to five, from the United States (USD 1 billion, pre-2025), Japan, the United Kingdom, Australia and Denmark. The 2023 capital reforms unlock USD 100 billion over a decade and take annual commitments past USD 36 billion by 2034. The Samarkand annual meeting in May 2026 unveiled a USD 70 billion regional infrastructure programme, USD 50 billion of it a pan-Asian power grid.

Asian Infrastructure Investment Bank

Beijing. President Zou Jiayi since 16 January 2026, a former Chinese vice minister of finance, succeeding founding President Jin Lique; 111 members. In 2025 AIIB approved USD 10.6 billion for 57 projects with a 71 percent climate share, the highest of any MDB, and above its 50 percent floor every year since 2022. The joint report counts USD 7.47 billion. It raised USD 10.2 billion in sustainability bonds in 2025 in thirteen currencies, including its second climate adaptation bond, on cumulative issuance past USD 54 billion. Climate Action Plan since September 2023; GCF accreditation agreement signed in 2025; eleventh annual meeting in Doha, 28 and 29 September 2026.

The line: the highest climate share of any development bank, on a smaller base, and a decade in, the counter-example to the reflex that a Chinese-led bank means coal. The adaptation bond is the borrowable idea.

African Development Bank

Abidjan. President Sidi Ould Tah since 1 September 2025, elected with over 76 percent of the vote. In 2025: USD 5.93 billion of climate finance, 54 percent of approvals, with adaptation at 58 percent of it, the only MDB where adaptation outweighs mitigation. Cumulative 2020 to 2025 about USD 25.5 billion against a USD 25 billion pledge. Approvals over USD 11 billion, record disbursements of USD 7.1 billion, in an annual report released 29 May 2026 at the Brazzaville meetings.

ADF-17, the concessional window, closed in London in December 2025 at a record USD 11 billion from 44 partners, up 23 percent, with 24 African countries contributing about USD 180 million, twenty of them for the first time. The ask had been USD 25 billion. Both halves of that sentence belong in any answer about African ownership.

Inter-American Development Bank Group

Washington. President Ilan Goldfajn since December 2022, term to December 2027. The joint report gives the Group about USD 9.6 billion of climate finance in 2025; the percentage share of approvals could not be verified from the Bank's own indicator pages. IDB Invest posted a record USD 13.1 billion of activity including USD 7.7 billion mobilised. Targets set at COP29: USD 11.3 billion a year by 2030, a 50 percent green share for IDB and 60 percent for IDB Invest, and USD 25 billion of adaptation finance over 2024 to 2030, the most specific adaptation commitment among the regional banks. Amazonia Forever is the model brand: one umbrella, five pillars, a USD 100 million first

Amazonia Bond of a USD 1 billion programme, and COP30 in Belém as the home fixture with over USD 6 billion of announcements.

European Investment Bank

Luxembourg. President Nadia Calviño since January 2024. Two perimeters, and you must say which: the Group signed a record EUR 100 billion in 2025 with EUR 57 billion, nearly 60 percent, for climate action and environmental sustainability; the Bank alone reports EUR 50.3 billion, over 60 percent. The joint report's USD 56.4 billion matches the Bank figure, and 92 percent of it went to high-income economies.

Climate Bank Roadmap phase two, for 2026 to 2030, was approved unanimously on 30 September 2025: over half of annual financing green through 2030, adaptation doubled to EUR 30 billion, and the EUR 1 trillion green investment goal for 2021 to 2030 with over EUR 560 billion supported by end-2025. That doubling is the number to cite when someone says adaptation cannot scale inside a bank.

European Bank for Reconstruction and Development

London. President Odile Renaud-Basso since November 2020, term to 2028. In 2025: EUR 9.4 billion of green finance, 56 percent of a record EUR 16.8 billion across 640 projects, 75 percent of it private sector, with first-ever investments in sub-Saharan Africa (Benin) and Iraq. The Green Economy Transition strategy for 2026 to 2030, approved 4 March 2026, commits at least EUR 150 billion cumulative green finance and a green share of at least 50 percent every year. Four years above 50 percent on a private-sector-heavy book is the answer to "the private sector will not do adaptation".

NDB, IsDB, CAF

New Development Bank, Shanghai, President Dilma Rousseff, re-elected July 2025; eleven members after Colombia and Uzbekistan joined. Cumulative approvals USD 42.9 billion. Climate finance fell to USD 1.2 billion in 2025 from a record USD 2.5 billion, or 55 percent, in 2024; the 2025 share could not be verified. **Islamic Development Bank**, Jeddah, President Muhammad Al Jasser: Group approvals USD 15.8 billion in 2025, up 20 percent; climate finance 42 percent of commitments, USD 2.4 billion on the Bank basis or USD 6.6 billion on the Group basis, so flag the basis. A pledge of at least USD 13 billion of climate finance over 2023 to 2030. **CAF**, the Development Bank of Latin America and the Caribbean, Caracas, Executive President Sergio Díaz-Granados, re-elected to 2031: record approvals of USD 18.7 billion in 2025, 44 percent green, a 50 percent target for 2030 and USD 40 billion of green finance pledged to 2030. Not a joint-report signatory; in Latin America it is the second climate lender after the IDB Group.

NDB and IsDB are the two whose 2025 climate numbers fell or flattened while every other bank's rose. Worth knowing before praising "all the MDBs".

Bigger, and not yet better

The reform lineage runs from the G20's 2022 capital adequacy review through Brazil's 2024 roadmap to the American G20 presidency of 2026, which produced no communiqué at the April finance ministers' meeting and excluded South Africa. The balance-sheet half of the agenda has largely

happened: ADB up 50 percent, IBRD about USD 100 billion extra, hybrid capital placed, and a revised S&P methodology that implies the major banks could carry USD 600 to 800 billion more in loans and keep their AAA ratings. Callable capital of USD 796 billion is still not counted by the rating agencies. The "better" half, country platforms, speed, coordination, has not: fewer than half of client countries think the banks coordinate well, unchanged since 2021. With the G20 stalled, the venue in 2026 is the heads of the banks themselves, whose 17 April statement set up an originate-to-distribute working group, a common jobs metric and mutual-reliance co-financing. Bangkok in October is where the year's argument lands.

PART THREE. THE RULES AND THE DONORS

The architecture, in one paragraph

The UNFCCC's Financial Mechanism has two operating entities, the GCF and the GEF. Two more funds serve the Paris Agreement: the Adaptation Fund and the loss and damage fund. The Standing Committee on Finance counts the flows every two years. The COP sets the goals. Executive Secretary Simon Stiell of Grenada has been in post since August 2022 and was reappointed in June 2025.

The counting

The Sixth Biennial Assessment, presented at COP29, put global climate finance at USD 1.3 trillion a year for 2021 and 2022, with adaptation at 11 percent, least developed countries receiving 2.6 percent and small island states 1.0 percent. Climate-specific support from developed to developing countries: USD 58.3 billion a year. Fossil-fuel investment ran at USD 958 billion a year against the same USD 1.3 trillion of climate flows.

The OECD's eighth assessment, released 21 May 2026 with data to 2024, is the official accounting of the USD 100 billion goal: USD 115.9 billion in 2022, USD 132.8 billion in 2023, USD 136.7 billion in 2024. Public finance is about three-quarters of the total. Adaptation is a quarter, USD 34.7 billion in 2024. Within public finance, loans fell to 67 percent and grants rose to 29 percent, the highest bilateral grant share since 2016. Mobilised private finance jumped to USD 30.5 billion, and for the first time the multilateral climate funds mobilised a meaningful amount of it, USD 4.5 billion. The Glasgow promise to double adaptation finance from the OECD's 2019 baseline of USD 18.8 billion still needs another USD 5.8 billion in 2025.

There are two honest adaptation numbers, and they are not the same: the OECD's USD 34.7 billion provided and mobilised for 2024, and UNEP's USD 26 billion of international public flows for 2023. Know which one the room is using before you quote a gap.

The goal and the roadmap

COP29 in Baku set the New Collective Quantified Goal: at least USD 300 billion a year by 2035 for developing countries, developed countries taking the lead, and a call on all actors to reach USD 1.3 trillion a year from all sources. The Baku to Belém Roadmap of November 2025 laid out five fronts to get there: more grants and low-cost capital, fiscal space and debt, affordable private finance, capacity and coordination, systemic reform. Developed countries read the USD 300 billion as multi-

source; developing countries read Article 9.1 of the Paris Agreement as the obligation that anchors it. That is the argument under every finance text in 2026.

What Belém decided, and what Antalya inherits

COP30 in Belém in November 2025 "calls for efforts to at least triple adaptation finance" by 2035, with no baseline year, no named contributors and no instrument definition; the earlier 2030 deadline and explicit USD 120 billion figure were dropped. It adopted 59 of 100 indicators for the Global Goal on Adaptation, set a two-year work programme on Article 9 as a whole, created the Belém Action Mechanism for just transition, and noted with concern that the Adaptation Fund's USD 300 million annual target is not being met. The Tropical Forests Forever Facility launched there with USD 5.5 billion.

Bonn in June 2026 ended in gridlock: the whole adaptation text bracketed and passed to COP31, the finance work programme rejected by the G77 and China because it did not sit on Article 9.1, the Adaptation Fund's board composition deferred.

COP31 is Antalya, 9 to 20 November 2026, under an arrangement that took a year to reach: Türkiye holds the presidency, with Murat Kurum as COP President, and Australia's Chris Bowen is President of Negotiations with exclusive authority over the texts. A pre-COP in Fiji runs 5 to 8 October with a leaders' event in Tuvalu. Three finance items are unfinished from Belém and Bonn: the Article 9 work programme's first outputs, a baseline and tracking method for the adaptation tripling, and the Adaptation Fund's governance. Any fund communicating into Antalya should have a one-line position on each. New bilateral pledges are expected from the United Kingdom (announced), Canada (announced), and still owed from Australia, Japan and Germany.

The United States

The timeline, because the room will assume you know it. 20 January 2025: executive order to leave the Paris Agreement, effective 27 January 2026. February 2025: USD 4 billion of outstanding GCF pledges cancelled, the first rescission in the Fund's history. March 2025: exit from every Just Energy Transition Partnership. 1 July 2025: USAID closed, with over 98 percent of its climate-tagged awards, USD 2.1 billion, terminated. 7 January 2026: a memorandum withdrawing from 66 organisations and treaties including the UNFCCC and the IPCC. 8 January 2026: the GCF notified of withdrawal, the Board seat vacated. The last real figure was over USD 11 billion a year in fiscal 2024, over USD 3 billion of it adaptation. ODI's fair-share index already scored the United States at 41 percent of its share in 2023, a shortfall above USD 26 billion, the largest by far. Roughly USD 11 billion a year has left the system, about a third of it USAID adaptation money, and it lands hardest on least developed countries. Germany, Japan and the banks have back-filled specific lines, Indonesia's partnership among them, not the aggregate.

Who pays their share

ODI's November 2025 edition, on 2023 data, apportions the USD 100 billion by cumulative emissions, income and population. Fifteen of 23 countries met their share, the most yet. Four gave more than double: Norway 376 percent, France 226 percent, Sweden 220 percent, Japan 210 percent. Germany

175 percent, the United Kingdom 104 percent. Short: Canada 79 percent, Australia 56 percent, the United States 41 percent. The quality caveat: France and Japan get there with loans.

The donors, one line each

Provider	Latest figure	What to know in 2026
Japan	USD 70 billion public and private through 2025 (restated at COP29); USD 22.3 billion in 2023, mostly JICA loans	No successor pledge found by September 2026; expect one at or before Antalya
Germany	EUR 6.1 billion in 2024, meeting the EUR 6 billion pledge a year early	Projected EUR 4.9 to 5.7 billion in 2025 and EUR 4.8 to 5.2 billion in 2026 after BMZ cuts; EUR 1 billion over ten years to TFFF; USD 69.4 million to the Adaptation Fund at COP30; replaced the United States in Indonesia's partnership
France	EUR 7.2 billion in 2024, EUR 3 billion adaptation; about 80 percent loans	Fifth consecutive aid cut; the 2026 budget cuts the aid mission 16 percent and multilateral aid 42 percent; no post-2025 target; co-chairs the solidarity levies task force
United Kingdom	GBP 11.6 billion over 2021/22 to 2025/26, met after a 2023 accounting change	ICF4 (strategy of 22 June 2026): about GBP 6 billion of aid over three years plus GBP 6.7 billion of non-aid instruments; aid to 0.3 percent of GNI by 2027; GBP 400 million loan to TFFF, 3 September 2026
EU institutions and member states	EUR 31.7 billion public plus EUR 11.0 billion mobilised in 2024; EU budget EUR 4.6 billion of it	Global Gateway passed EUR 306 billion mobilised, but it is an investment brand, not a climate finance line; the 2028 to 2034 budget negotiation decides the next instrument's climate share
Netherlands	About EUR 1 billion a year, half of it mobilised private capital (older baseline)	Structural EUR 2.4 billion cut from 2027; a new minister since February 2026 has not restored the climate line
Norway	Record NOK 30.3 billion in 2025, up 60 percent, mostly Norfund mobilisation	Oslo itself expects 2026 to fall; USD 3 billion to TFFF, the largest sponsor
Sweden	Record SEK 11.1 billion in 2024; SEK 8 billion to GCF-2, the largest contribution per capita	Aid budget trimmed to SEK 53 billion a year for 2026 to 2028
Denmark	Record DKK 6 billion in 2024; DKK 1.6 billion to GCF-2	Aid held at 0.7 percent of GNI; UN City Copenhagen hosts the agencies that spend it
Canada	CAD 5.3 billion over 2021 to 2026	Renewed in April 2026 at CAD 3 billion public plus CAD 2 billion of FinDev capital, a shift from grants to balance sheet; blocked a tripling reference at Bonn with Norway and Japan
Australia	A\$3 billion pledge for 2020 to 2025, delivered A\$3.9 billion	No post-2025 commitment as of late August 2026, while running the COP31 negotiations; expect a number at the Fiji pre-COP

The aid picture behind all of this: ODA fell 23.1 percent in 2025 to USD 174.3 billion and the OECD projects another 6.9 percent fall in 2026, with aid to least developed countries down 10.9 percent and to sub-Saharan Africa down 11.6 percent. Climate finance held up in the 2024 data because the

banks and mobilised private money carried it. The 2025 numbers, published in 2027, are the ones to brace for.

The UN agencies that spend it

Agency	Head	Role in the money
UNDP	Alexander De Croo, Administrator from early 2026	The largest GEF agency at 29 percent of GEF-8 and GCF's biggest UN partner; Climate Promise 2025 over USD 2 billion in 125-plus countries; co-created SOFF
UNEP	Inger Andersen	GCF and GEF accredited; its Copenhagen Climate Centre writes the Adaptation Gap Report, the number everyone will use at COP31
FAO	Qu Dongyu	Second-largest GEF agency at 16 percent; GCF portfolio USD 1.2 to 1.4 billion; hosts the Investment Centre that prepares pipelines
IFAD	Alvaro Lario	40 percent climate target, USD 666 million in 2024; ASAP+ for smallholders; IFAD13 programme of work USD 10 billion
WMO	Celeste Saulo	Hosts CREWS, co-created SOFF, co-leads Early Warnings for All, with SOFF and CREWS as the two purpose-built instruments under it
WFP	Cindy McCain	Disaster risk financing: 4.9 million people in 44 countries protected with USD 380 million of cover in 2025
UNICEF	Catherine Russell	GCF accreditation agreement effective 16 June 2026; first UNICEF-led proposals expected late 2026 or 2027

WMO closed its 2026 budget gap with voluntary contributions and says 2027 is not yet funded; staff cuts have already been made. Two agencies hold nearly half of GEF programming, and UNDP is the GCF's biggest partner. A fund's UN-facing communication is mostly about those two, plus the vertical-fund newcomers WMO and UNDP run.

Platforms and new instruments

Just Energy Transition Partnerships have all learned the same lesson: pledges are easy, coal retirement contracts are not. South Africa stands at USD 12.8 billion after the American exit, about USD 3.8 billion allocated. Indonesia is at USD 21.4 billion after Germany replaced the United States, with about USD 3.1 billion, 15 percent, approved, and the flagship Cirebon-1 retirement slipping toward 2037. Vietnam had retired no coal as of April 2026. Senegal's investment plan was still unpublished.

The Tropical Forests Forever Facility is the largest new nature-finance vehicle since the GCF: a USD 125 billion endowment design, USD 25 billion of sponsor capital leveraged to USD 100 billion from private investors, paying about USD 4 per hectare of standing forest with a fifth ring-fenced for Indigenous peoples. Launch pledges of USD 5.5 billion (Norway USD 3 billion, Brazil and Indonesia USD 1 billion each), Germany EUR 1 billion over ten years, and the United Kingdom's GBP 400 million loan on 3 September 2026. Reuters reports about three-quarters of the USD 10 billion first-year threshold secured. Sponsor money is a loan into an endowment, not a grant, which is both the design and the critics' doubt.

Solidarity levies. The task force co-chaired by Emmanuel Macron, William Ruto and Mia Mottley now has a nine-country premium-flyers coalition (Benin, Djibouti, France, Kenya, Nigeria, Sierra Leone,

Somalia, South Sudan, Spain) and claims levies could deliver 10 to 30 percent of the USD 1.3 trillion. The largest single levy in play, the IMO's shipping carbon price, stalled under American pressure in October 2025; its status in September 2026 was not confirmed.

Debt swaps and Bridgetown. Legal and General committed USD 1 billion to debt-for-nature deals in February 2026; Colombia is pursuing peace-linked swaps. Mia Mottley's Bridgetown 3.0 of September 2024 remains the reference agenda for shock-proofing, resilient debt clauses and MDB reform; she won a third term in 2026 and lends her island's name to the loss and damage fund's start-up modalities.

PART FOUR. PRIVATE CAPITAL AND PHILANTHROPY

The whole picture

CPI's 2026 edition: USD 2.008 trillion in 2024, an estimated USD 2.1 trillion in 2025, growth down to 6 percent. Mitigation USD 1.9 trillion; adaptation flat at USD 64 billion, about 3 percent of the total. Domestic finance is 85 percent of everything, households alone USD 332 billion. Private investment over USD 1.2 trillion, with commercial financial institutions at USD 572 billion, more than doubled since 2019. International public climate finance fell 6 percent in 2024, and flows to least developed countries dropped 21 percent to USD 36 billion. The public-private split reads as roughly 38 to 62 from the report's own chart; the researchers derived it rather than read it, so confirm before quoting the percentage. China's share of the 2026 total was not confirmed either.

The IEA's World Energy Investment 2026: USD 3.4 trillion of total energy investment, USD 2.2 trillion of it clean against USD 1.2 trillion fossil, and emerging economies outside China getting under 30 percent of energy investment and 20 percent of power investment for two-thirds of the world's people. BloombergNEF: USD 2.3 trillion of transition investment in 2025, up 8 percent, electrified transport the largest slice at USD 893 billion.

The mismatch is the story. Two trillion sounds like arrival; it is a third of what is needed, adaptation is 3 percent of it, and insured catastrophe losses alone passed USD 100 billion for a sixth year.

The coalitions, after the exits

The Net-Zero Banking Alliance ceased operations on 3 October 2025 after the American and Canadian banks left; the European banks largely kept their 2024 interim targets. The Net Zero Asset Managers initiative suspended in January 2025 and relaunched on 25 February 2026 with 253 signatories and no 2050 or 1.5-degree wording, without BlackRock, Vanguard or the big American houses; Rebecca Mikula-Wright chairs. GFANZ restructured in January 2025 into a capital-mobilisation platform with no membership model, Mark Carney gone, Michael Bloomberg and Mary Schapiro remaining. Climate Action 100+ counts 165 focus companies, 71 investor exits against 87 joiners, Valeria Piani in the chair.

The split is now structural. A federal court struck down Texas's anti-ESG law in February 2026, then Texas sued the proxy adviser ISS in May. The EU's Omnibus cut mandatory sustainability reporting to firms over 1,000 employees and due diligence to firms over 5,000, in force 18 March 2026, but kept

both laws. For a fund's communication the safe register is deployed capital and outcomes, not membership badges. The badges are what got litigated.

Blended finance and guarantees

Convergence counts USD 18 billion of blended finance across 123 deals in 2024, USD 15.5 billion of it climate. Against USD 1.2 trillion of emerging-economy climate flows that is under 2 percent; it matters as a de-risking instrument, not as volume, and it is better to say so before someone on the panel does. The World Bank's Guarantee Platform issued USD 12.3 billion in its first year, heading for USD 20 billion a year by 2030; guarantees are the instrument of the moment because they move private balance sheets without moving public cash. The Private Sector Investment Lab under Shriti Vadera has a pooled debt fund pilot due at the October 2026 meetings.

Philanthropy

Funder	Latest figure	Leader
All climate philanthropy	USD 11.7 to 18.4 billion in 2024, 2.1 percent of global giving; foundations alone USD 6 billion; adaptation USD 870 million	ClimateWorks Foundation, CEO Helen Mountford; Funding Trends 2026
Bezos Earth Fund	USD 2.4 billion granted of a USD 10 billion pledge by April 2026, three-quarters still to place by 2030	Tom Taylor, CEO since July 2025
Bloomberg Philanthropies	USD 4.3 billion distributed in 2025; covering the American share of the UNFCCC budget since January 2025, amount not confirmed	Michael Bloomberg, UN Special Envoy
IKEA Foundation	EUR 404 million paid out in 2025, EUR 354 million of it for climate	Jessica Anderen
CIFF (Children's Investment Fund Foundation)	USD 1.45 billion committed in 2025, its first year above USD 1 billion	Kate Hampton
Gates Foundation	USD 1.4 billion over 2026 to 2029 for smallholder adaptation, announced at COP30	Mark Suzman
Rockefeller and GEAPP	Over USD 1 billion over five years; GEAPP launched with USD 10 billion, progress metrics not found	Rajiv Shah; Woonchong Um
Quadrature Climate Foundation	Past USD 1 billion cumulative by September 2024	Jess Ayers

At most USD 18 billion against USD 2 trillion, under 1 percent. Philanthropy's job is catalytic and political, and the good funders say so themselves. One private funder is quietly keeping the UNFCCC secretariat whole; the line around it is deliberately understated.

Bonds and carbon

Green bonds reached USD 653.5 billion in 2025 and labelled sustainable debt passed USD 1 trillion for a third year; cumulative issuance crossed USD 7 trillion on 26 May 2026. The bond market never got the memo that sustainability was over. The Paris Agreement Crediting Mechanism under Article 6.4 issued its first credits on 26 February 2026: 603,368 tonnes from a Myanmar cookstove programme, credited about 40 percent below the legacy value after a conservative recalculation. Integrity over volume was the message chosen. The voluntary market's spot value was USD 535 million in 2024 while retirements hit a record 202 million tonnes in 2025 and forward corporate

commitments reached USD 16 billion; it has become a procurement market, not a trading one. From 1 January 2026, VCMI claims require Core Carbon Principles credits or Article 6.4 credits.

Losses

Swiss Re: USD 107 billion insured in 2025, 92 percent from so-called secondary perils, the Los Angeles wildfires a USD 40 billion record. Munich Re: USD 224 billion overall, USD 108 billion insured; first-half 2026 USD 112 billion overall and USD 44 billion insured, 60 percent uninsured. The protection gap is the adaptation-finance argument in one number.

PART FIVE. WHAT I DO WITH THIS

The lines I would hold

1. Two trillion is a third of the need, and adaptation is 3 percent of it.
2. The banks did USD 163 billion; the number for developing countries is USD 103 billion, and grants are under 4 percent.
3. The 100 billion was met three years running, a quarter of it adaptation, two-thirds of the public money loans. The NCQG conversation is about quality and predictability now, not the headline.
4. Aid fell 23 percent in 2025 and is falling again. The 2025 climate numbers arrive in 2027; brace.
5. Every climate fund is raising money at once, and the American money is gone from all of them.
6. The loss and damage fund has USD 449 million in the bank, USD 2.8 billion requested, nothing out. December decides the narrative.
7. Adaptation has two honest numbers, USD 34.7 billion and USD 26 billion. Say which.
8. Three trackers, three totals; never add them.
9. Guarantees are the instrument of the moment. Explain one in a sentence.
10. The private coalitions dissolved; the targets mostly did not. Talk about deployed capital, not badges.

The traps

- Fiscal year against calendar year at the World Bank and IFC.
- EIB Group (EUR 57 billion) against EIB Bank (EUR 50.3 billion); IsDB Bank (USD 2.4 billion) against Group (USD 6.6 billion).
- Global Gateway's EUR 306 billion is mobilised investment, not climate finance.
- "USD 163 billion for developing countries" is wrong by USD 60 billion.
- GCF-2's USD 10.64 billion already excludes the United States; older pages still show USD 12.8 billion pledged in 2023.
- Pledged against paid in, everywhere, and above all at the loss and damage fund.
- A tripling target with no baseline is an argument, not a number.

Who to read

Source	What they publish	Flagship
Climate Policy Initiative	Every dollar, public and private	Global Landscape of Climate Finance, each June
ODI Global	Fair-share analysis, MDB reform, the multilateral funds	"A fair share of climate finance?"; Climate Funds Update with Heinrich Böll
World Resources Institute	Finance indicators, COP explainers	State of Climate Action
E3G	Public banks, MDB reform, G7 and G20 finance diplomacy	Public Bank Climate Tracker
IIED	Least developed countries and locally led adaptation finance	Principles for Locally Led Adaptation, LDC finance analysis
Heinrich Böll Stiftung, Climate Funds Update	Independent data on every multilateral climate fund	Climate Finance Fundamentals briefs, each spring
Climate Home News	Daily coverage of the negotiations, the GCF Board, loss and damage	COP live coverage
Devex	The development-finance angle: aid cuts, philanthropy, the banks	Devex Invested
Carbon Brief	Data-led fact checks of who pays what	COP finance trackers

Plus the OECD for the official USD 100 billion accounting, Convergence for blended finance, the Climate Bonds Initiative for labelled debt, and Swiss Re and Munich Re for losses.

WHAT I COULD NOT CONFIRM

The researchers flagged these, and I have left them flagged rather than smoothed over. Anyone using this document should re-check them the week they need them.

- GCF: a standalone Annual Results Report 2025 was not found; the figures come from the Secretariat's own 2026 decks and releases.
- GEF: whether a fiscal 2025 annual report exists, and the final GEF-9 total after the July 2026 trustee resolution.
- Adaptation Fund: whether any Article 6.4 share-of-proceeds cash has arrived in 2026.
- CIF: the annual report's own cumulative pledge figure (USD 12 billion or "almost 14"), and whether a second bond was issued.
- Loss and damage fund: the paid-in figure comes from Climate Home News citing the trustee report, because the fund's site blocks fetches; the American pledge's status.
- Global Shield's total (EUR 270 or 350 million); NDC Partnership's current co-chairs.
- The World Bank's fiscal 2025 split between IBRD, IDA, IFC and MIGA; IDB's and NDB's 2025 percentage shares; the 2019 MDB baseline targets.
- CPI's public-private split and China's share for 2024.
- Bloomberg Philanthropies' exact UNFCCC contribution; GFANZ governance beyond its two principals; Convergence's reported 2025 record.

- Japan's March 2026 loss and damage contribution and any post-2025 pledge; France's, the Netherlands' and Portugal's TFFF amounts; the shipping levy's status.
- Agency heads flagged "verify the week you need them": JICA, JBIC, AFD, Norad, Sida, FinDev Canada, the EU commissioners.

SOURCES

Every figure in this document has a URL in one of the four research files that accompany it, compiled on 7 September 2026:

- Part A, the multilateral climate funds (GCF, GEF, Adaptation Fund, CIF, loss and damage fund, SOFF, CREWS, Global Shield, NDC Partnership, Early Warnings for All).
- Part B, the development banks and the joint report, with the reform agenda.
- Part C, the UNFCCC architecture, the OECD and ODI accounting, the bilateral providers, the UN agencies, and the platforms and instruments.
- Part D, the global landscape trackers, the private coalitions, blended finance, philanthropy, bonds and carbon, insurance, and the reading list.

Editions used, for the record: CPI Global Landscape of Climate Finance 2026 (24 June 2026); Joint MDB Climate Finance Report 2025 (13 July 2026); OECD Climate Finance Provided and Mobilised 2013 to 2024 (21 May 2026); UNFCCC Sixth Biennial Assessment (2024); UNEP Adaptation Gap Report 2025 (29 October 2025); ODI A fair share of climate finance? (November 2025); Heinrich Böll and ODI Climate Finance Fundamentals (2026 edition, April 2026); ClimateWorks Funding Trends 2026; IEA World Energy Investment 2026 (28 May 2026); BloombergNEF Energy Transition Investment Trends 2026; Swiss Re sigma 1/2026; Munich Re natural disaster figures (13 January and 30 July 2026); the annual reports and trustee statements of each institution named, latest editions to September 2026.

That is the map. I will keep it current.
